

VIC-Snap Remote

by Correlated Solutions

The new Vic-Snap Remote app by Correlated Solutions is an exciting new way of controlling Vic-Snap without being tied to a computer. With the new Vic-Snap Remote app you can conveniently view live images on your mobile device or tablet while setting up cameras. This enables the user to speed up an already simple calibration process and specimen setup with features like pinch to zoom, image alignment with crosshairs, and exposure control to optimize image quality. The Vic-Snap Remote app is compatible with most iOS and Android devices and is available to download today.

With the Vic-Snap Remote, acquiring images has never been easier. All that is required to start using Vic-Snap Remote is a compatible iOS or Android device, a computer setup with Vic-Snap, and a wireless network that connects the wireless device to Vic-Snap. After downloading the Vic-Snap Remote app you will have access to the following features.

Vic-Snap Remote Features

- Single user remote calibration
- Remote camera triggering for image acquisition
- Complete exposure adjustment and control
- Over and under-exposure indicated
- View gray scale histogram for each image
- Pinch-to-zoom live images
- Double tap images for full screen viewing
- Toggle crosshairs for easy alignment
- Detect & control multiple Vic-Snap systems with one device

Install Vic-Snap Remote today. If your version of Vic-Snap is up to date, you can download the app today. All the features mentioned above are waiting for you at the Apple App Store or the Google Play Store.
